VECTORS

12^{th} Math - Chapter 10

This is Problem-16 from Exercise 10.5

- 1. If θ is the angle between two vectors $\overrightarrow{\mathbf{a}}$ and $\overrightarrow{\mathbf{b}}$, then $\overrightarrow{\mathbf{a}} \cdot \overrightarrow{\mathbf{b}} \geq 0$.
 - (a) $0 < \theta < \frac{\pi}{2}$
 - (b) $0 \le \theta \le \frac{\pi}{2}$
 - (c) $0 < \theta < \pi$
 - (d) $0 \le \theta \le \pi$

Solution: Assume that a,b are

$$\mathbf{a} = \begin{pmatrix} 4\\3 \end{pmatrix} \tag{1}$$

$$\mathbf{b} = \begin{pmatrix} 5\\12 \end{pmatrix} \tag{2}$$

We know that

$$\theta = \cos^{-1} \left(\frac{\mathbf{a}^{\mathsf{T}} \mathbf{b}}{\|\mathbf{a}\| \|\mathbf{b}\|} \right) \tag{3}$$

$$\mathbf{a}^{\top}\mathbf{b} = \cos\theta \|\mathbf{a}\| \|\mathbf{b}\| \tag{5}$$

Where

$$\|\mathbf{a}\| = \sqrt{4^2 + 3^2}$$
 (6)
= 5 (7)

$$= 5 \tag{7}$$

$$\|\mathbf{b}\| = \sqrt{5^2 + 12^2} \tag{8}$$

$$=13\tag{9}$$

(a) for
$$\theta = 0$$

$$\mathbf{a}^{\top}\mathbf{b} = \cos(0)(5)13) \tag{10}$$

$$=65\tag{11}$$

$$\Longrightarrow \mathbf{a}^{\mathsf{T}} \mathbf{b} \ge 0 \tag{12}$$

(b) for $\theta = \frac{\pi}{2}$

$$\mathbf{a}^{\top}\mathbf{b} = \cos(\frac{\pi}{2})(5)(13) \tag{13}$$
$$= 0 \tag{14}$$

$$=0 (14)$$

$$\Longrightarrow \mathbf{a}^{\top} \mathbf{b} \ge 0 \tag{15}$$

(c) for $\theta = \pi$

$$\mathbf{a}^{\mathsf{T}}\mathbf{b} = \cos(\pi)(5)(13) \tag{16}$$
$$= -65 \tag{17}$$

$$= -65 \tag{17}$$

$$\Longrightarrow \mathbf{a}^{\top}\mathbf{b} < 0 \tag{18}$$

Therefore, the θ is $0 \leq \theta \leq \frac{\pi}{2}$. So, option (b) is correct.
